

vScan

Vulnerability Scanning and Management as a Service

Harden your Network with automated, regular Vulnerability Management

vScan from Silicon is a powerful, comprehensive and automated vulnerability scanning & Management solution designed to safeguard your business. With regular monthly scans, vScan proactively identifies potential threats, and provides actionable recommendations for mitigating these threats. Unlike a single annual scan, our monthly service provides continuous protection and timely detection of vulnerabilities, enhancing your security posture over time.

How it works:

Get Started Today.

Traditional & expensive annual vulnerability testing is history. Protect your business with vScan from Silicon, the ultimate solution for continuous, proactive vulnerability management.
